SUMMARY

Software Developer with 2 years of experience building and maintaining web applications for the investment management sector in regulated production environments. Skilled in React, Vue.js, TypeScript, Node.js and PostgreSQL, with hands-on experience in REST APIs, system integration and process automation. Focused on clean, responsive front-end development and reliable back-end services, with a growing interest in interactive 3D web experiences and cybersecurity.

EXPERIENCE

Petros: Petrobras Social Security Foundation sep/2024 - sep/2026

Full Stack Software Development Intern (Investment Department)

- Developed and maintained internal web applications used daily by the investment department, , delivering front-end and back-end features with Vue.js, TypeScript and Node.js.
- Integrated systems with external financial data providers through REST APIs and RabbitMQ messaging, reducing manual data entry and automating daily processes.
- Built automations for internal workflows and file reconciliation, saving hours of manual work.
- Traced data flows and maintained PostgreSQL databases to ensure accurate records of securities and asset movements.
- Diagnosed and fixed production bugs, improving the stability of business-critical applications.
- Maintained BI dashboards in QlikView used for investment reporting and decision-making.
- Worked across the full development lifecycle with Git, Docker and Azure DevOps CI/CD pipelines.

PROJECTS

Personal Portfolio (React, Vite): responsive multilingual website (EN, PT, FR, JA) with light/dark themes, section transitions and scroll-free navigation, animated with GSAP and styled with CSS Modules. Includes unit tests with Vitest and Testing Library.

Waves of Light (React, WebGL, GLSL): developed a lightweight, customizable animated background featuring dynamic light waves, shadows, and grain effects inspired by sunlight moving across the ocean floor. Implemented using a single GLSL fragment shader with no additional dependencies beyond React and integrated an interactive settings panel to customize background colors, animation speed, and other visual parameters.

Gatos de Francisca Website (React / Node.js): Full-stack website for a cat shelter with an adoptable cats section and a fundraising store, backed by a REST API with Excel data export.

3D Modeling Projects: Created and published 3D assets using Blender, including modeling, texturing, lighting, animation and rendering, with projects shared on Sketchfab for free use.

EDUCATION

B.Sc. in Computer Science – CEFET/RJ | Expected Dec 2028

Software Engineering Program – 42 Rio (42 École network) | Nov 2023 – Jan 2025

SKILLS

Languages: JavaScript, TypeScript, Python, C, C#, SQL

Front-end: React, Vue.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Design, Three.js, Vite, Vitest, React Testing Library

Back-end: Node.js, Express.js, .NET, Next.js, REST APIs, RabbitMQ, PostgreSQL

DevOps & Tools: Docker, Git, Azure DevOps, CI/CD, Linux, DBeaver, Postman/Insomnia, QlikView

CERTIFICATIONS

Google Cybersecurity Professional Certificate (2026) • Google UX Design Professional Certificate (2026)

Santander Coders – Front-End Development Track (2023)

LANGUAGES

Portuguese (Native) • English (Fluent) • French (Intermediate, B1) • Japanese (Basic, JLPT N4)

AND ADDITIONAL INFORMATION

Volunteer at a cat shelter since 2023 (animal care, fostering and social media management) • Available for remote, hybrid and relocation
